

SUVESH PANDEY

jpsuvesh29@gmail.com | +91-7224899871 | suveshpandey.vercel.app
linkedin.com/in/suvesh-pandey | github.com/suveshpandey

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript

Frontend/Backend: React.js, Next.js, Tailwind CSS, TanStack Query, FastAPI, Node.js, Express.js, Prisma ORM, Kysely, Server-Sent Events (SSE)

Databases: MySQL, PostgreSQL, MongoDB, Redis

Cloud/Tools: AWS (S3, EC2, RDS, Kendra), Vercel Sandbox, Docker, Git

PROFESSIONAL EXPERIENCE

Associate Software Engineer – Euron

Feb 2026 – Present

- Built EuronTracker, an end-to-end internal project-management platform (Jira-class) – multi-view Kanban (7 views), team chat & DMs, notification engine, time tracking with billable reports, analytics dashboards, and org chart – using Next.js 15, React 19, TypeScript, Express.js, Kysely/PostgreSQL (AWS RDS), Redis, and AWS S3; shipped as a self-contained module (20+ tables, 80 REST endpoints) inside an Express/Postgres monolith.
- Designed a three-tier RBAC system (global roles to project roles to granular capability flags) enforced server-side on every endpoint, and implemented polling-based real-time messaging (replies, reactions, read receipts, presence & typing) via incremental updated-at cursors and Redis TTL keys – eliminating WebSocket infrastructure entirely.
- Optimized for scale and responsiveness with delta-sync polling, keyset pagination, SQL query optimization (grouped aggregates eliminating N+1 queries), adaptive poll intervals, direct-to-S3 presigned uploads, and race-safe optimistic UI delivering near-instant perceived interaction latency.
- Engineered Natrajan, a US-focused AI healthcare documentation platform, converting real-time conversations to SOAP notes (under 30s) and medical codes (under 40s); built event-driven architecture using AWS ECS, SQS, enabling EHR/telehealth API integration (5-6s) and supporting high concurrency.

Software Engineering Intern – Euron

Nov 2025 – Jan 2026

- Developed StudyTap, a RAG-based AI platform serving 2K-4K students, delivering answers (under 25s) and diagram insights (under 40s).
- Built backend using FastAPI, AWS (S3, Kendra, SQS) with async pipelines, enabling document ingestion in 10-15s.
- Implemented PDF text + diagram extraction using PyMuPDF and OpenCV.

PROJECTS

InferLoop.AI – Test-Driven AI Companion for Competitive Programming | [Live](#) | [Server](#) | [Client](#)

- Designed and shipped a full-stack AI code-review platform (Next.js, TypeScript, Express.js, Prisma, PostgreSQL) running a 5-agent loop – Test Generator, Analyzer, Critic, Improver, Evaluator – that reviews, rewrites, and re-tests Python/C++ solutions, returning the iteration with the highest sandbox-measured test pass-rate.
- Built the code-execution layer on Vercel Sandbox (Firecracker microVMs) with a prebuilt g++ snapshot for fast C++ cold starts, engineering a per-request VM lifecycle with exactly 1 snapshot and 0 lingering sandboxes at steady state.
- Streamed the full pipeline live to the browser via Server-Sent Events with discriminated-union event types, rendering test generation, each agent stage, and per-case sandbox results in real time.
- Hardened the backend for production with Argon2 password hashing, JOSE-signed JWT access + DB-backed refresh tokens, multi-origin CORS, and rate limiting; integrated Euri AI Gateway for swappable LLM providers (Gemini, Ollama).

CodePilot – AI-Assisted Code Learning Platform | [Live](#) | [GitHub](#)

- Engineered an AI-powered coding platform using Next.js, TypeScript, Tailwind CSS, and Gemini API, supporting multiple programming languages.
- Integrated NextAuth (Email + Google OAuth), AI-based code correction, quiz generation, and YouTube API with caching for optimized performance.
- Designed a responsive interface with real-time code execution, AI hints, and result comparison, improving user learning experience.

Excalibord – Real-Time Collaborative Canvas | [Live](#) | [GitHub](#)

- Built a real-time collaborative canvas using Next.js, Node.js, PostgreSQL, WebSockets.
- Implemented room-based architecture, Google OAuth, and persistent state management.

CODING PROFILES

LeetCode: Solved 700+ DSA problems, rating 1500+.

GeeksForGeeks: Solved 150+ problems, ranked Top 5 in college.

EDUCATION

B.Tech in Information Technology

2023 – 2027

Mahatma Gandhi Chitrakoot Gramodaya Vishwavidyalaya (MGCGV), Chitrakoot | GPA: 8.2/10.0

Class 12th (Senior Secondary), CBSE | Percentage: 80.2/100

2022 – 2023
